OFFSHORE SPINNING LINE CAPACITIES

MODEL	GEAR RATIO	MONO CAPACITY	BRAID CAPACITY
OFS4500	4.7:1	250 yds. / 20 lb.	300 yds. / 50 lb.
OFS5500	4.7:1	320 yds. / 20 lb.	375 yds. / 50 lb.
OFS6500	4.4:1	575 yds. / 12 lb.	400 yds. / 50 lb.
OFS7500	4.4:1	480 yds. / 15 lb.	356 yds. / 65 lb.
OFS8500	4.4:1	540 yds. / 20 lb.	400 yds. / 65 lb.
OFS9500	4.4:1	600 yds. / 20 lb.	470 yds. / 65 lb.

OVERSIZED MULTI-STACK OFFSHORE DRAG SYSTEM
Fin-Nor's Offshore spinning reels feature up to 10 carbon fiber, aluminum and stainless steel drag washers that are designed specifically to handle the ocean's biggest fish.

True Offshore Performance... For Spin Fishermen.

Quality spinning is the mainstay of saltwater fishing – be it from the shore or from a boat – spinning tackle is the most popular saltwater reel offering. Today, one of the fastest growing trends in fishing is the targeting of big fish on spin gear.

For fishermen who want to use spinning instead of heavier, more cumbersome conventional reels, Fin-Nor Offshore is the ideal choice. Braided lines, stronger rods and new baits spurred our engineers to develop new technologies, and experiment with new, high-tech materials.

Offshore spinning reels are built to allow anglers to go after tarpon, tuna, big sharks and even billfish without worrying about equipment failure. Our OFS9500 offers the largest line capacity for a spinning reel.

OFFSHORE™

by FIN-NOR

Forged Aluminum Spool

Offshore's strong aluminum spool has both a water dam and sealed drag, and an advanced spool lip for longer casting. You'll get maximum results whether fishing heavy monofilament or braided lines.

Teardrop Line Slider with Oversized Roller

Advanced teardrop line slider and contoured arm lever and hood reduce the chance of line hang-ups and the computer balanced rotor makes for smooth retrieves.

Stainless Steel Main and Pinion Gears

Solid stainless steel main gear and machined stainless pinion gear have oversized teeth and are double-supported with oversized bearings. Offshore reels keep their perfect alignment even under heavy drag loads and extended fish battles.

Oversized Steel Center Shaft

Offshore's strong center shaft is made of stainless steel and supported at the top and bottom for rigid support and high-load capability.

Aluminum Body, Side Plate and Rotor

Strong aluminum body and rotor keep the reel from twisting or flexing even under load. Patented computer rotor design creates perfect balance. Special anti-corrosion protection has been added to the outside – and inside – of the reel to help protect it from the damage that can occur in a harsh saltwater environment.

Oversized Carbon Fiber Drag

Oversized multi-stack carbon fiber drag washers are water sealed for protection and allow Offshore to have tremendous drag range and dissipate heat better during long fish-fighting battles. Smooth-running and able to handle heavy drag loads assure that Offshore is a unique reel able to handle huge fish.

Ergonomic Handle Knob

This comfortable easy to use handle knob is supported with an oversized handle arm and shaft leading into a sealed handle. You'll have confidence fishing with this solid connection.
